CCTV

In today's world, the security of our properties has become a major concern for many people. CCTV also known as surveillance cameras have become a popular choice for enhancing security, deterring criminal activity, and providing valuable evidence in case of a crime. CCTV is commonly used in public locations, such as **Traffic lights**, which frequently have cameras to monitor for traffic violations, **Stores**, which have cameras to prevent crimes perpetrated by customers, **Warehouses**, which have systems to prevent unauthorized access and protect stored materials, **Construction sites**, which have cameras to prevent theft or vandalism, **Neighborhoods**, which use cameras to deter criminals — especially in areas with high crime rates

REMOTE CCTV MONITORING

Remote CCTV monitoring is the process of having your CCTV cameras and video surveillance actively monitored by a professional security company, or Alarm Receiving Centre around the clock. The service connects your CCTV cameras to an off-site monitoring station using wired internet, 4/5G or wireless connectivity.

If the system is activated, our control room operators will check live CCTV footage to verify if an intruder is on-site. They will then initiate a police response, issue an audio challenge, and contact a nominated key holder.

INTRUDER ALARM MONITORING

Intruder alarm monitoring services offers to ensure your family members, customers, businesses are protected round the clock, giving you and them peace of mind. Your intruder alarm systems will be professionally monitored by our team of highly trained operators, in service from our state-of-the-art control room.

ACCESS CONTROL

Access control is the process of determining and enforcing who has access to buildings, grounds, equipment, and sensitive areas. Understanding who is on the property and who is inside buildings is important to prevent the types of crimes that make headlines. It can also be a safeguard in emergency situations so emergency response personnel can count people to ensure that everyone has evacuated and is accounted for.

FLEET MANAGEMENT

We are an advanced fleet management and tracking service provider. Our advanced tracking platform gives you the power to monitor your valuable assets and vehicles from any computer. Use our secure, web-based to gather reports about up-to-the-second route information, stops and more. Our solutions are applicable in any type of asset tracking scenario, including truck, trailer, van and car tracking, personal tracking, bikes, and various types of equipment and inventory.

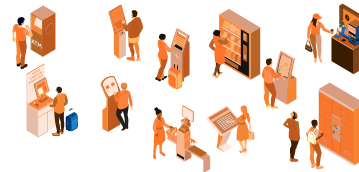

ICT – SOFTWARE SYSTEMS & SOLUTIONS

We endeavor to transform your business processes and be your reliable partner as your business needs evolve in this fast-paced and technologically versatile environment. We continuously incorporate emerging technologies at the core of our solutions, leveraging on their capabilities to guarantee and deliver value, satisfaction and optimized service. With our diverse clientele portfolio incorporating public, private entities and beyond reproach standing, you can trust us to deliver.

Our range of software solutions Include:

Queue Management

Self Service Kiosk

Events Ticket Control

Security Inspection

STRUCTURED CABLING

A structured cabling system is a complete system of cabling and associated hardware, which provides a comprehensive telecommunications infrastructure. This infrastructure serves a wide range of uses, such as to provide telephone service or transmit data through a computer network.
